

Energy Constellations

Large NYC Buildings Mapped by their ENERGY STAR Score - Fall 2025

By: Katelyn Louie (CS '29) & Tasnia Ahmed (CS '29)

Primary Property Type:

- Multifamily Housing (10,247 buildings)
- Office (1,266 buildings)
- K-12 School (244 buildings)

NYC Local Law 84:

This city law requires buildings (over 50,000 square feet) to track and report the energy and water consumption annually. This helps identify energy-inefficient buildings and aims to lower emissions for a sustainable future.

ENERGY STAR Score

(scores assess the energy performance of commercial buildings)

> 75 - Top Performer

50 - Median

As shown through the constellation clusters, the office scores the highest in the ENERGY STAR score out of the three major property types.

Energy efficiency clusters differ by property type.

Office buildings typically perform well, while multifamily housing and K-12 schools have lower scores and wider spreads. The constellations reflect the differences in building use and infrastructure: offices "shine" brightest due to their higher investment, while schools' broader, lower ranges point to disparities in resources and the conditions of the building.
